# Generations and Gender Survey Australia Wave 1 & Wave 2 (GGS Australia Wave 1 & Wave 2)

Contained in "*The Household, Income and Labour Dynamics in Australia Survey*"

Overview	
<b>Identification</b>	GGSW1.W2.24
<p><b>Abstract</b></p> <p>The Generations and Gender Survey (GGS) provides micro-level data with the aim of significantly improving the knowledge base for social science and policymaking in Europe and developed countries elsewhere.</p> <p>In Europe 2020, the European Union develops a strategy "to help us come out stronger from the crisis and turn the EU into a smart, sustainable and inclusive economy delivering high levels of employment, productivity and social cohesion". The economic crisis affects not only day-to-day decisions, but also fundamental choices at all stages of people's lives: marriage and childbearing, the combination of employment and caring responsibilities for the young and the old, retirement, housing, and ageing well. The GGS has been developed to provide scientists with high-quality data to contribute scientifically grounded answers to these key policy questions. Survey content focuses on intergenerational and gender relations between people, expressed in care arrangements and the organization of paid and unpaid work. Key feature of the survey are:</p> <ul style="list-style-type: none"> <li>- Cross-national comparability. In each country data is collected on the basis of a common international questionnaire and guidelines about the methodology. Data processing includes central harmonization of national datasets.</li> <li>- A broad age range. It includes respondents between the ages of 18 and 80.</li> <li>- A longitudinal design. It has a panel design, collecting information on the same persons at three-year intervals.</li> <li>- A large sample size. It has an average of 9,000 respondents per country at Wave 1.</li> <li>- A theory-driven and multidisciplinary questionnaire. It provides data for policy relevant research by demographers, economists, sociologists, social policy researchers, social psychologists and epidemiologists. The questionnaire is inspired by the theory of planned behavior.</li> <li>- Possibility to combine the survey data with macro data provided by the GGP Contextual Database. This combination enables analyses of individuals and families in their cultural, economic, political, social and policy contexts.</li> </ul>	
<b>Kind of Data</b>	Survey data
<b>Unit of Analysis</b>	Individuals

Scope & Coverage	
<p><b>Scope</b></p> <p>The GGS in Australia was "piggybacking" on the Household Income and Labour Dynamics in Australia (HILDA) survey. The HILDA Survey is a panel household survey that started in 2001, with a wave each following year.</p> <ul style="list-style-type: none"> <li>- GGS Wave 1 corresponds to HILDA Wave 5 (2005-2006).</li> <li>- GGS Wave 2 corresponds to HILDA Wave 8 (2008-2009).</li> </ul>	
<b>Keywords</b>	Fertility, Partnership, Transition to adulthood, Work-family balance, Gender relations, Intergenerational exchanges, Informal and formal care, Well-being and health, Grandparenthood, Economic activity, Retirement
<b>Time Period(s)</b>	2005-2009
<b>Countries</b>	Australia
<p><b>Geographic Coverage</b></p> <p>It covers the six Australian states and two territories outside the borders of the states, excluding remote and sparsely populated areas.</p>	
<p><b>Universe</b></p> <p>The reference population for the HILDA survey wave 1 was all members aged 15+ of private dwellings in Australia, with the following exceptions:</p> <ul style="list-style-type: none"> <li>• diplomatic personnel of overseas governments, customarily excluded from censuses and surveys;</li> </ul>	

- overseas residents in Australia (i.e., persons who had stayed or intended to stay in Australia for less than one year);
- members of non-Australian defence forces (and their dependents) stationed in Australia; and
- people living in remote and sparsely populated areas.

To ensure that all members of the in-scope population have the same probability of selection, dwellings that are not primary places of residence (e.g., holiday homes) were also excluded.

All members of the households providing at least one interview in wave 1 form the basis of the panel to be pursued in each subsequent wave.

<b>Funding Agency/ies</b>	Australian government through the Department of Families, Housing, Community Services and Indigenous Affairs

## Sampling

### Sampling Procedure

#### SAMPLING PROCEDURE FOR HILDA WAVE 1

##### 1. Sampling frame

1.1 Type of frame: List of geographic units - 1996 Census districts (CDs). This frame excluded CDs that had zero land area (usually used for homeless people or off-shore/migratory people) or were remote or sparsely populated.

1.2 Frame coverage: NA

1.3 Frame size: From 34,422 Census Districts in 1996, CDs defined as remote or sparsely populated were excluded. In addition CDs that had zero land area were also excluded. A sample of 488 CDs were then selected.

1.4 Level of units available: Dwelling

##### 2. Sampling method

2.1 Sampling method type: Multistage

2.2 Sampling stage definition

- PSU: Census District

- SSU: Dwellings

- TSU: Households

2.3 Sampling stage size

- PSU: 448

- SSU: 12,252 (22-34 dwellings chosen within each census district depending on the expected response and occupancy rates of the area)

- TSU: 7800

2.4 Unit selection: Census District Selection. The list of 1996 Census Collection Districts (CDs) formed the area-based frame from which 488 CDs were selected. The frame of CDs was stratified by State, and within the five largest States in terms of population, by metropolitan and non-metropolitan regions. The CDs were sampled with probability proportional to their size as measured by the number of dwellings (unoccupied and occupied) recorded in the 1996 Census. To ensure the sample of CDs selected provided good coverage of the CDs in the frame, the CDs were sorted by statistical sub-division and section of State. Within each of these groups, the CDs were sorted into geographical (or serpentine) ordering based on the centroid of the CDs. Using a random start, a systematic selection of CDs was then undertaken by staff at the Melbourne Institute.

2.5 Final stage unit selection: Dwelling selection and Household selection.

- Dwelling selection: ACNielsen used a specifically trained team of interviewers to visit each selected CD and provide a full listing of the dwellings from which dwellings were selected for the [HILDA] Wave 1 sample. The interviewers followed

a predetermined route around the entire CD to list all dwellings they came across. Particular attention was paid to ensure that all dwellings had an equal probability of selection, including granny flats, flats, residential warehouses and battleaxe properties. The actual number of dwellings selected within each CD varied depending on projected variations across CDs in response rates and in occupancy rates. The response rate assumptions were based on ACNielsen's experience with survey response rates within the metropolitan and non-metropolitan areas of each State. The occupancy rates are based on the 1996 Census occupancy rates, with the additional qualification that no more than 10 additional selections could be added to cover the expected number of unoccupied dwellings. Given a targeted average of 16 responding households per CD, this meant the selected sample had to be large enough to generate 23 occupied in-scope dwellings per CD. The average number of selected dwellings was thus 25. The selection of dwellings from those listed occurred as follows: The initial dwelling was selected at random from the list of dwellings in the area. A skip of five in urban areas and two in rural areas was then applied to select the remainder of the dwellings required for the area. This ensured that the cluster of dwellings selected from each CD was sufficiently spread out across the CD while not generating large travel costs. For five of the more remote CDs selected that were extremely large in size, a block selection stage was used so that the entire CD did not have to be listed. For each of these areas, a satellite map which details the buildings in the CD was used to divide the CD into blocks with an approximately equal expected number of dwellings in each. A sample of these blocks was selected for full block listing.

- Household selection: Where a dwelling contained three or fewer households, all such households were sampled. Where there were four or more households occupying one dwelling, a random sample of three households was obtained. Where there were four or more households occupying one dwelling, all households had to be enumerated at the time of first contact and a random sample of three households obtained.

2.6 Within Household unit selection: All household members aged 15 and over interviewed.

2.7 Stratification: Explicit

## AUSTRALIAN GGS WAVE 1

The sampling procedure above outlined, describes the method used to select the initial HILDA sample. However, the GGS Wave 1 did not come from the first wave of HILDA, but rather from Wave 5. The selection of the sample in Wave 5 would have been determined in large part from the initial sample selection used when HILDA first started. However, some people who participated in Wave 5 of HILDA (Wave 1 of GGS), would have been new people who entered after Wave 1 and who would not have been exposed to the same sample selection as the respondents who had participated since Wave 1.

Over time, the Wave 1 household members are followed but the sample is also extended to include:

- any children born to or adopted by members of the selected households; and
- new household members resulting from changes in the composition of the original households.
- a new household member that arrived in Australia for the first time after 2001 (since HILDA Wave 9).

Continuing Sample Members (CSMs) include all members of wave 1 households (including children). Any children born to or adopted by CSMs are also classified as CSMs. Further, all new entrants to a household who have a child with a CSM and any recent immigrants to Australia (arriving after 2001 for the Main Sample, 2011 for the Top-Up Sample) are converted to CSM status<sup>35</sup>. CSMs remain in the sample indefinitely. All other people who share a household with a CSM in wave 2 or later are considered Temporary Sample Members (TSMs).

Where the household has moved, split or moved and split, the interviewers and office staff track the CSMs. The CSMs (along with their new household) are then interviewed, where applicable, at their new address or by phone.<sup>36</sup> TSMs that split from a household and are no longer part of a household with a CSM are not followed. However, if the TSM is converted to a CSM, then they are followed for interview as any CSM would be.

## AUSTRALIAN GGS WAVE 2

The sample is represented by respondents who participated to HILDA Wave 5.

### **Response Rate**

#### **WAVE 1**

Final disposition codes:

I = complete interview: 12,759 persons

P = partial interview: NA

NE = non-eligible : NA

NC = non-contact : NA

R = refusal: For 9,138 households, in 700 cases there was no contact. Of enumerated individuals, 72 could not be contacted

O = other non-response: For 9,138 households, in 1,313 cases refused. Of enumerated individual, 598 refused

UC = unknown eligibility, contacted: Of enumerated individuals, 142 had other reasons for non-response

UC = unknown eligibility, non-contact: NA

eC = estimated proportion of contacted cases of unknown eligibility that are eligible: NA

eN = estimated proportion of non-contacted cases of unknown eligibility that are eligible: NA

## WAVE 2

Final disposition codes for HILDA WAVE 8 (total no. of household interviewed 7066)

I = complete interview: 12,785 persons

P = partial interview: NA

NE = non-eligible : NA

NC = non-contact : NA

R = refusal: For 9,691 households, in 206 cases there was no contact.

O = other non-response: For 9,138 households, in 459 cases refused.

UC = unknown eligibility, contacted: 1970 household were not issued to field.

UC = unknown eligibility, non-contact: NA

eC = estimated proportion of contacted cases of unknown eligibility that are eligible: NA

eN = estimated proportion of non-contacted cases of unknown eligibility that are eligible: NA

See HILDA annual reports for further information on response rates of HILDA survey ([http://www.melbourneinstitute.com/hilda/Reports/annual\\_report.html](http://www.melbourneinstitute.com/hilda/Reports/annual_report.html)).

Specific Response rates for GGS Australia will be provided in forthcoming weeks.

## Weighting

The datasets contain two versions of the cross-sectional person weight:

- The responding person population weight is the cross-section population weight for all people who responded in the relevant wave (i.e. they provided a personal interview).
- The responding person sample weight is the cross-section responding person population weight rescaled to sum to the number of responding persons in the relevant wave.

These cross-sectional weights opportunistically include temporary members into the sample (i.e., those people who are part of the sample only because they currently live with a continuing sample member). The underlying probability of selection for these households is amended to account for the various pathways into the household. Following this, non-response adjustments are made which require within-sample modelling of non-response probabilities and benchmarking to known population estimates.

## Data Collection

<b>Data Collection Dates</b>	start 2005-08 end 2006-03 start 2008-08 end 2009-02
<b>Data Collection Mode</b>	<p>WAVE 1</p> <ul style="list-style-type: none"> <li>• Method: Face-to-Face, Telephone and Self-administered were used. 93.5 per cent of respondents (N=11,932) were interviewed face-to-face, while 6.5 per cent (N=827) were interviewed by telephone. Respondents were also given a self-completion questionnaire to fill in.</li> <li>• Technique: Paper and Pencil (PAPI).</li> </ul> <p>WAVE 2</p> <ul style="list-style-type: none"> <li>• Method: Face-to-Face, Telephone and Self-administered were used. 10.1 per cent of the respondents were interviewed by telephone. Respondents were also given a self-completion questionnaire to fill in.</li> <li>• Technique: Paper and Pencil (PAPI).</li> </ul> <p>The vast majority of the data were collected through face-to-face interviews. While telephone interviews and assisted interviews were conducted to ensure a high response rate, they are only used as a last resort. Due to the fact that some households moved outside of the areas originally selected</p>

across Australia in wave 1 and the desire to interview as many people as possible, more telephone interviews are necessary in later waves.

## **Data Collection Notes**

### **WAVE 1 DATA COLLECTION**

#### **1. Interviewers**

- 1.1 Total number of interviewers: 132
- 1.2 Number of interviewers in the field: DK.
- 1.3 Network organization: DK.
- 1.4 Working arrangement of interviewers: DK.
- 1.5 Payment of interviewers: DK.

#### **2. Interviewer training**

- 2.1 General interviewing: Yes, with a briefing session covering the aims of the survey, fieldwork procedures, questionnaire content, and strategies to maximise response rates.
- 2.2 Survey specific: NA.
- 2.3 Length: The main briefing period took place over two days. Less experienced interviewers were also provided with an extra days training session focusing on refusal aversion.
- 2.4 Control of performance: Yes. Regular monitoring of each interviewer's response rate and progress against fieldwork schedule. Reallocation of workloads of under-performing interviewers to better interviewers, and scrutinisation of work returned by interviewers and provision of feedback especially in relation to the quality of the data collected. Supervisors re-contacted respondents to validate a minimum of 10 per cent of the questionnaires completed by each interviewer. The supervisors validated a selection of questions with the respondent as well as questioning any discrepancies identified in the provided information.
- 2.5 Interviewer survey: NA.

#### **3. Contact protocols**

- 3.1 Advance letter: A Primary Approach Letter and Newsletter were sent about one month prior the interviewer was supposed to contact the household. The newsletter informed about some results from prior waves of HILDA Survey. Households with new entrants to the survey, were given a New Entrants Brochure, which provided additional information about the study, why they had been asked to participate, and a method to opt out of the study.
- 3.2 Cold contacts: NA.
- 3.3 Scheduling / scattering: Yes, calls were made on a minimum of five different days, not all of which could be consecutive. A mix of daytime and evening times were used.
- 3.4 Contact history: Yes.
- 3.5 Min number of contacts: No.
- 2.6 Max number of contacts: Yes. The interviewer had up to six calls to make contact and a further six calls to undertake all of the interviews once contact had been made. If a household had to be put into tracking and was found, the initial call allocation to make contact with the household was carried over to the next period of the fieldwork. When following up a household, the interviewer had a total of five calls to finalise the household.

#### **4. Questionnaire localization**

- 4.1 Validation: NA.
- 4.2 Pre-test: A pilot was carried out in April 2005 (500 respondents).
- 4.3 Length of interview: The average length of the person interview was 31.7 minutes for a 'continuing sample member' who had also been interviewed at least once in previous HILDA surveys; 37.5 minutes for a 'new sample member'. There was an additional 30 minutes on average to complete a self-completion questionnaire, and 6 minutes for the household form.

### **WAVE 2 DATA COLLECTION**

#### **1. Interviewers**

- 1.1 Total number of interviewers: 138
- 1.2 Number of interviewers in the field: DK.
- 1.3 Network organization: DK.
- 1.4 Working arrangement of interviewers: DK.
- 1.5 Payment of interviewers: DK.

**2. Interviewer training**

Same as Wave 1 (see above).

**3. Contact protocols**

Same as Wave 1 (see above).

**4. Questionnaire localization**

4.1 Validation: NA.

4.2 Pre-test: The questionnaires are developed over the 9-month period prior to the main fieldwork for each wave.

4.3 Length of interview: The average length of the person interview was 35.8 minutes.

There was an additional 30 minutes on average to complete a self-completion questionnaire, and 6 minutes for the household form.

**Questionnaires**

Structured questionnaire in English (though a professional interpreter may be present during the interview).

**Data Collector(s)**

Melbourne Institute of Applied Economic and Social Research (MIAESR)  
The Nielsen Company (ACNielsen)

**Supervision****WAVE 1 ACTIONS****1. Dealing with nonresponse**

- Incentives: a cheque for \$25 to each person of the household who participated; plus a bonus \$25 in case everybody in the household took part.

**2. Tracking of sampled units**

2.1 Respondent contact information: Yes, contact details of the respondent were collected. These included work and mobile phone numbers, emails, and new address if the respondent was planning to move in the next 12 months, and knew his/her new address.

2.2 Other contact information: Yes. One to two contacts were obtained from the sample members of people who were most likely to know where they were if they moved. Work, home and mobile phone numbers, email addresses and postal addresses were collected for these contacts.

2.3 Cards: Yes a follow-up newsletter was sent.

2.4 Additional surveys: DK

2.5 Administrative records: No.

**WAVE 2 ACTIONS**

Same as Wave 1.

**Data Processing & Appraisal****Data Editing**

The keyed numerical data were subject to 100 per cent verification (i.e., the data was entered in twice and any discrepancies corrected). The keyed verbatim responses were only entered once as these were only used for coding purposes and any mis-entered data could be easily identified and corrected. During data entry, the data was checked using range, logical and consistency edits. Where necessary the data entry was suspended until the identified problem was resolved.

### **Access Conditions**

In order to access, it is necessary to subscribe to the GGP Data User Space, and to follow the instructions available on the GGP data access webpage.

### **Citation Requirements**

In any work emanating from research based on the Generations and Gender Survey micro-data, I will acknowledge that these data were obtained from the GGP Data Archive and refer to the publication that describes the model survey instruments: United Nations 2005. Generations & Gender Programme: Survey Instruments. New York and Geneva: UN, 2005

## **Rights & Disclaimer**

### **Disclaimer**

The authors and producers bear no responsibility for the uses of the GGS data, or for interpretations or inferences based on these uses. The producers accept no liability for indirect, consequential or incidental damages or losses arising from use of the data collection, or from the unavailability of, or break in access to the service for whatever reason.

# Files Description

Dataset contains 2 file(s)

<b>GGG_Wave1_Australia_V.4.3.</b>	
<b># Cases</b>	7125
<b># Variable(s)</b>	841
<b>File Structure</b>	Type: relational Key(s): arid (R identification number)
<p><b><u>File Content</u></b> GGG Wave 1</p> <p>VARIABLES HAVING ALL SYSTEM MISSING CASES ARE DROPPED BEFORE PUBLICATION IN NESSTAR. This is the reason why the total no. of variables in the Nesstar data file is smaller than the total number of variables in the SPSS and STATA files.</p> <p>Variables are ordered according to the sections of the GGS codebook: Household, Children, Partnerships, Household Organisation and Partnership Quality, Parents and Parental Home, Fertility, Health and Well-Being, Respondent's Activity and Income, Partner's Activity and Income, Household Possessions, Income and Transfers, Value Orientations and Attitudes, Interviewers' report.</p> <p>The variables begin with a letter designating the wave of data collection ("a" for the first wave likewise "b" for the second wave). We have attempted to keep the names of variables the same across the waves, and all the new variables would be identified as follows ["wave letter"]n e.g. bn301.</p> <p>Although we encourage the countries to strictly follow the GGS Questionnaire, countries might implement a question that differs to a considerable extent from the GGS Questionnaire. In this case either we add country specific response values, or we introduce a country specific variable.</p> <p>Country specific values are added when the question follows the model questionnaire, but the answers are not at all or partly compatible. They are at least 4 digits long (F4 format) and begin with the country code: e.g., Australia 2401. Hence, the country code, as an example, for Australia is 24.</p> <p>A country specific variable is introduced when the question differs from the model questionnaire albeit measuring the same concept. This kind of variables is identified with a suffix given by the country code plus a number, e.g., Australia a119_2401. In order to have an overview of GGS country code, please refer to the variable "acountry".</p>	
<p><b><u>Version</u></b> Harmonized dataset, GGS Wave1, version 4.3.</p> <p>IMPROVEMENTS INTRODUCED WITH V.4.3. (August 2016):</p> <p>Variables corrected with Version 4.3.:</p> <ul style="list-style-type: none"> <li>- fertintent (no more ambiguous labelling)</li> <li>- a1101 (corrected error in coding)</li> <li>- aweight (now available also for NLD CZE SWE POL)</li> <li>- aregion (now available also for HUN)</li> <li>- aplace (now available also for HUN)</li> <li>- a5112 (corrected routing error for ROU)</li> <li>- a5113 (corrected routing error for ROU)</li> <li>- a5114 (corrected routing error for ROU)</li> <li>- a5115 (corrected routing error i for ROU)</li> <li>- a211b_ (corrected error for POL &amp; GEO)</li> <li>- ankids (corrected error for POL &amp; GEO)</li> <li>- a1008mnth (corrected error for NGR &amp; BEL)</li> <li>- a108 (now available for SWE)</li> <li>- a109_1 (now available for SWE)</li> </ul>	

- a109\_2 (now available for SWE)
- a149 (now available for SWE)
- a309 (now available for SWE)
- aregion (now available for SWE)
- a620\_ (corrected error for DEU & CZE)
- a402 (corrected error for POL)
- a149 (corrected error routing error in NOR)
- a344 (corrected error routing error in NOR)
- a256\_ (corrected error for POL & GEO)

#### IMPROVEMENTS INTRODUCED WITH V.4.2. (February 2014):

The update from v4.1 to v4.2 does not include corrections of existing variables.

The update only includes additional variables which are derived from the pre-existing datasets

- Variables derived from grid variables and variables which concern the respondents and his/her partner:

numdissol,numdivorce,nummarriage,numpartners,livingwithpartner,childprevp,femage,maleage,femeduc,maleeduc,fertintent,numbiol,num

- Variables derived from month and year variable: a808Dur a822Dur,a907Dur,a911Dur,a914Dur;

a303cAgeP,a315AgeP, a316cAgeP a374cAgeP a608AgeP a610AgeP,a617bAgeP,a621AgeP,a914AgeP,a941AgeP;

a107AgeR,a121AgeR,a150AgeR,a239aAgeR,a239bAgeR,a240AgeR,a301AgeR,a302bAgeR,a311AgeR,a314bAgeR,a314dAgeR,a371Age

a302bTdiff,a314bTdiff,a314dTdiff,a372bTdiff.

- Variables derived from hours and minutes variables: a324\_hour a520\_hour a540\_hour.

- Variables derived from frequency and unit variables:

a205mnth,a241mnth,a325mnth,a355mnth,a359mnth,a363mnth,a367mnth,a521mnth,a541mnth,a1008mnth,a1102mnth;

a203c\_?w a204c\_?w.

- Occupation variables recoded into ISCO-88 1 digit: a828\_1dig a832\_1dig a861\_1dig a917\_1dig a921\_1dig a933\_1dig a5112\_1dig a5114\_1dig.

#### IMPROVEMENTS INTRODUCED WITH V.4.1. (April 2012):

- Variables corrected: aeduc amarstat anpartner ankids\$

- Variables with correct names now: aweight\_\*

#### IMPROVEMENTS INTRODUCED WITH V.4.0 (March 2012):

- New constructed variables: asex aage abyear aeduc aactstat aparstat amarstat anpartner ankids ahhsz ahhstype.

- New consolidated variables on respondents' current activity: a870, a871m, a871y, a874, a875.

- New consolidated variables on respondents' partners current activity: a940, a941m, a941y.

- Variables corrected: a601 and a602 (corrected, with consequences on the response rate of subsequent variables), a622, a623, a624, a625, a626, a627\*, a628\*, a629\*, a631\*, a383 (now rounded)

FIRST DATASET RELEASED: V. 3.0 (January 2012).

### **Processing Checks**

#### **WAVE 1 DATA HARMONISATION**

The data is submitted in an already pre-harmonised form. It is prepared and organised according to the GGS standards.

Harmonisation aims at achieving a clear and comparable format of the GGS micro-data files that would be adequate for cross-country comparison. The harmonisation procedure basically is composed of:

##### **1. Label checks**

This step makes sure that all the variables are named the same across the countries and refer to a particular question in the GGS Questionnaire. Also the value labels are checked. They should be the same across GGS datasets.

##### **2. Dealing with grids**

The GGS Questionnaire holds several grids of either event history information or members of the household. Such data needs to be harmonized with specific attention to order and logical consistency of grid-rows (be either household members or events such as births). In data sense each row of the grid is represented by variable name followed by a subscripted number ("\_#"). Each subscript thus represents one household member or one event. Part of the grid harmonization is grid sorting. Grid rows are sorted according to pre-defined key. For example in the household grid, the household members are sorted according to their relationship to the respondent i.e. the relation to respondent variable (ahg3\_# or bhg3\_# ). Respondents would appear, first, followed by their partners and children if any and then followed by other household members. As there

may be more than one child (or other relative) living in the household they also would need to be sorted. In the case of the household grid, age is used as the secondary sorting key (starting with the oldest person to the youngest).

### 3. Routing

Routing check ensures that the structure of underlying data set matches the structure of the GGS questionnaire. Its main goal is to code any given variable in the dataset to either a valid response, nonresponse or skip as indicated in the questionnaire. Consequently, the indicated skip in the questionnaire is represented with a system missing code (. in STATA, sysmis in SPSS), while the missing information for other reasons is coded into non-applicable/no response (i.e. codes 7, 8, 9 in SPSS or .a, .b, .c in STATA).

### 4. Consolidation

The process consolidates the information scattered over several variables into a single one. The consolidation procedure is carried out in the Children Section, the Partnership Section and the Parents and Parental Home Section.

### 5. Imputation

Due to its sensitive nature, the respondents are reluctant to share income information with the interviewer. In order to be able to use income information in a cross country comparative study and not to lose too many observations in the process it is necessary to impute the approximately correct distribution of the income variable in each country.

### 6. Calculation of derived variables

We calculate derived variables out of the following variables:

- grid variables (i.e., household grid, children grid, and partnership history grid); the codebook starts with the constructed variables that sum the key socio-demographic characteristics of the respondent.
- month and year variables,
- hours and minutes variables,
- frequency and unit variables.

Occupation variables are recoded into ISCO-88 1 digit.

Explanations of the ways in which consolidated and derived variables are obtained, are available under the field "Note" of the "Variable Description" sections.

For a more detailed and technical procedure please refer to the Data Cleaning and Harmonisation Guidelines.

### **Missing Data**

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

## **GGG\_Wave2\_Australia\_V1.3.**

<b># Cases</b>	6143
<b># Variable(s)</b>	540
<b>File Structure</b>	Type: relational Key(s): arid (R identification number (W2))

### **File Content**

GGG Wave 2

VARIABLES HAVING ALL SYSTEM MISSING CASES ARE DROPPED BEFORE PUBLICATION IN NESSTAR.

This is the reason why the total no. of variables in the Nesstar data file is smaller than the total number of variables in the SPSS and STATA files.

Variables are ordered according to the sections of the GGS codebook: Household, Children, Partnerships, Household Organisation and Partnership Quality, Parents and Parental Home, Fertility, Health and Well-Being, Respondent's Activity and Income, Partner's Activity and Income, Household Possessions, Income and Transfers, Value Orientations and Attitudes, Interviewers' report.

The variables begin with a letter designating the wave of data collection ("a" for the first wave likewise "b" for the second wave). We have attempted to keep the names of variables the same across the waves, and all the new variables would be identified as follows ["wave letter"]n e.g. bn301.

Although we encourage the countries to strictly follow the GGS Questionnaire, countries might implement a question that differs to a considerable extent from the GGS Questionnaire. In this case either we add country specific response values, or we introduce a country specific variable.

Country specific values are added when the question follows the model questionnaire, but the answers are not at all or partly compatible. They are at least 4 digits long (F4 format) and begin with the country code: e.g., Australia 2401. Hence, the country code, as an example, for Australia is 24.

A country specific variable is introduced when the question differs from the model questionnaire albeit measuring the same concept. This kind of variables is identified with a suffix given by the country code plus a number, e.g., Australia b119\_2401. In order to have an overview of GGS country code, please refer to the variable "bcountry".

### **Version**

Harmonized dataset, GGS Wave2, version 1.3.

### **IMPROVEMENTS INTRODUCED WITH GGS\_Wave2\_V.1.3 (August 2016)**

Correction of the following variables that were previously erroneous: b343\_\*, bnumdissol, bnumdissol, bnumdivorce, bnumdivorce, bnummarriage, bnummarriage.

### **IMPROVEMENTS INTRODUCED WITH GGS\_Wave2\_V.1.2 (April 2015)**

The update from v1.1 to v1.2 does not include corrections of existing variables. The update only includes additional variables which are derived from the pre-existing datasets.

- Variables derived from grid variables and variables which concern the respondents and his/her partner: bnumdissol, bnumdissol, bnumdivorce, bnumdivorce, bnummarriage, bnummarriage, bnumpartnerships, bnumpartnerships, bnrespartafterw1, blivingwithpartner, bchildprevp, bnchildprevp, bfemage, bmaleage, bfemeduc, , bmaleeduc, bfertintent, bnumbiol, bnumnonres, bnumres, bnumstep, bnumallchild, bageoldest, bageyoungest, bcoreschild, bcoresgrandp, bcoresparen, bcoressibl, bhhtype.
- Variables derived from month and year variable: b121AgeR, b150AgeR, bn152AgeR, b239aAgeR, b239bAgeR, b240AgeR, bn304Agb303cAgeP, b311AgeR, b315AgeP, b316cAgeP, b371AgeR, b372bAgeR, b372bTdiff, b374cAgeP, b5116AgeR, b5117bAgeR, b603AgeR, b608AgeP, b608AgeR, b610AgeP, b610AgeR, b621AgeP, b621AgeR, b871AgeR, b907Dur, b911Dur, b914AgeP, b914Dur, b941AgeP.
- Variables derived from hours and minutes variables: b324hour, b520hour, b540hour, b221hour\_x.
- Variables derived from frequency and unit variables: b203c\_xw, b204c\_xw, b205mnth, b241mnth, b325mnth, b521mnth, b1008mnth.
- Occupation variables recoded into ISCO-88 1 digit: b828\_1dig, b832\_1dig, b861\_1dig, b917\_1dig, b921\_1dig, b933\_1dig.
- Three groups of variables derived from section no. 8 "Activity and Education History": 1) variables counting the total number of different activity and education situations Rs has had since age 16 (i.e., bnumworkstatuses, bnumstudentstatuses, bnumemplstatuses, bnumselfemplstatuses, bnumhelpfamstatuses, bnumunemplstatuses, bnumretiredstatuses, bnummilitarystatuses, bnumhomestatuses, bnummatleavestatuses, bnumparleavestatuses, bnumdisabilitystatuses, bnumotherstatuses, bnum1401, bnum1501, bnum1801, bnum1301, bnumparttime, bnumfulltime, bnumboth, bnumparttime\_1801, bnumparttime\_1802, bnumpartfulltime\_1803, bnumfulltime\_1804, 2) the total duration in month of each of the different situation (i.e., bndurstudentstatuses, bnduremplstatuses, bndurselfemplstatuses, bndurhelpfamstatuses, bndurunemplstatuses, bndurretiredstatuses, bndurmilitarystatuses, bndurhomestatuses, bndurmatleavestatuses, bndurparleavestatuses, bndurilldisabledstatuses, bndurotherstatusstatuses, bndur1501, bndur1401, bndur1301, bndurparttime, bndurlastparttime, bndurstudwhilework), 3) the age of R at the beginning and end of part-time employments (i.e., bn876\_xAgeR, bn877\_xAgeR, bn878xAgeR, bn879\_xAgeR).

The availability of these variables in each different country-specific file depends on the availability of variables used for their calculation.

### **IMPROVEMENTS INTRODUCED WITH V.1.2. in Nesstar GGS micro data files (April 2015):**

Publication of variables that were previously deleted before dataset release in Nesstar. The following variables are concerned: grid variables, month and year variables, hours and minutes variables, frequency and unit variables, and occupation variables.

FIRST DATASET RELEASED: V. 1.1. (March 2014).

### **Processing Checks**

WAVE 2 DATA HARMONISATION: see "Extent of Processing Checks" "WAVE 1 DATA HARMONISATION".

### **Missing Data**

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

### **Notes**

WAVE 2 DATASETS - Main differences compared to WAVE 1 datasets

Wave 2 datasets include an additional new section that had not been implemented in the Wave 1 data collection. It is the section no. 8 "Activity and Education History". Respondents report comprehensively on their activity and education history since age 16. Two additional sections are also present at the end of wave 2 dataset: "Interviewer observations" and "Interviewer report" (respectively sections no. 13 and 14).

A set of constructed variables at the top of the data file increase the usability of the GGS data by summarizing key socio-demographic characteristics of the respondent (age, birth year, sex, level of educational attainment, activity status, partnership status, number of co-resident partners, number of children, household size, household type). An additional set of variables consolidates information on the current activity of the respondent and his/her partner that is otherwise spread over the questionnaire. Another set of consolidated variables concern respondents' parents and parental home.

WAVE 2 DATASETS - Variables names

Variables in the Wave 2 data sets that are consistent with variables implemented in the Wave 1 questionnaire are named identically. Wave 2 variable names start with the letter "b" compared to letter "a" in Wave 1. Variables that have not been implemented in Wave 1 but collected in Wave 2 begin with "bn".

In Wave 2 datasets published in Nesstar, the variable "brid - R identification number" has been renamed into "arid" (same variable name than Wave 2). This allows the user to merge Wave 1 and Wave 2 datasets in Nesstar.

In Wave 2 datasets published in Nesstar, variable labels have the indication "(W2)". This allows the user to distinguish Wave 2 variables from Wave 1 variables, on the basis of the variable labels.

# Variables List

Dataset contains 1381 variable(s)

### # amonth: Mnth of interview

**Information** [Type= discrete] [Format=numeric] [Range= 1-2147483624] [Missing=\*/97/98/99]

**Statistics [NW/ W]** [Valid=7125 /-] [Invalid=0 /-]

**Definition** Q 001

**Pre-question** Interviewer Instruction: Write in the time and date when the interview starts.

**Literal question** Interview started at...on...

**Interviewer's instructions** Interviewer Instruction: Read the following text.  
This survey is called the Generations and Gender Survey. It is about topics related to children, partners, parents, work and everyday life. The aim is to study what factors influence family formation, having children, and relations between younger and older generations. The study is part of an international programme co-ordinated by the UN Economic Commission for Europe. Your participation is voluntary, but it is very important because you represent many other people. We will hold the information you give us in the strictest confidence and use it only for statistical processing. It would also be better if we could have this interview without others being present, if possible. If you have any questions, please let me know.

Value	Label	Cases	Percentage

### # femage: If partnered: age of female

<b>Information</b>	[Type= discrete] [Format=numeric] [Range= 14-85] [Missing=*]
<b>Statistics [NW/ W]</b>	[Valid=2087 /-] [Invalid=5038 /-]
<b>Definition</b>	Derived variable
<b>Universe</b>	If R has a partner
<b>Notes</b>	This variable indicates the age of the female in the relationship if the respondent says that they are currently in a relationship. If the respondent is female then the respondents age is used (aage.)

## File : GGS\_Wave1\_Australia\_V.4.3.

### # femage: If partnered: age of female

If the respondent is male and in a relationship with a female then their age is derived depending on the nature of the relationship. For a resident partner the age was copied from the Household grid (ahg5\_); for a non resident partner the age was calculated as: year of interview MINUS question 311 (variable a315y).  
Rs with non-resident partners are coded with "999 - not applicable/no response", when variable a315y is not available in the dataset.  
Note that this variable does not have a value for same-sex partnerships.

# a107AgeR: R's age of starting to live in country of interview			
Information	[Type= discrete] [Format=numeric] [Range= 0-63] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=1563 /-] [Invalid=5562 /-]		
Definition	Derived variable from Q 107 core questionnaire		
Universe	If code 2 on Q 105		
Literal question	In what month and year did you first start living permanently in [country]?		
Notes	<p>R's time of birth was deducted from HH grid. If information on the month of birth / month of starting to live in the country of interview was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"</p> <p>Data is not available for Estonia.</p>

# a119_2400: Number of BEDrooms			
Information	[Type= discrete] [Format=numeric] [Range= 0-2147483624] [Missing=*/97/98/99]		
Statistics [NW/ W]	[Valid=7120 /-] [Invalid=5 /-]		
Definition	Country specific variable (adapted from Q 114 core questionnaire).  AUS: it differs from Q 114 because interviewees are asked specifically about the no. of BEDrooms rather than the total no. of rooms in the dwellings where they live.		
Literal question	How many rooms are there in the dwelling where you live?		
Value	Label	Cases	Percentage

# a121AgeR: R's age of starting to live in current dwelling			
Information	[Type= discrete] [Format=numeric] [Range= 0-78] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=7053 /-] [Invalid=72 /-]		
Definition	Derived variable from Q 115 core questionnaire		
Literal question	In what month and year did you start living in this [type of accommodation]?		
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month of starting to live in the current dwelling was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig		

## # a121AgeR: R's age of starting to live in current dwelling

way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".

# a871AgeR: R's age at start of current activity status			
<b>Information</b>		[Type= discrete] [Format=numeric] [Range= 0-73] [Missing=*/997/998/999]	
<b>Statistics [NW/ W]</b>		[Valid=4526 /-] [Invalid=2599 /-]	
<b>Definition</b>		Generated from consolidated variables a871m and a871y.	
<b>Literal question</b>		In what month and year did you start this leave? In what month and year did you become unemployed? Since what month and year are you a student, studying at school, or in vocational training? In what month and year did you retire? Since what month and year are you a homemaker? In what month and year did you start this job or business?	
<b>Notes</b>		R's time of birth was deducted from HH grid. If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"  This variable is not available for Belgium.

# a941AgeP: Partner's age at start of current activity status			
Information	[Type= discrete] [Format=numeric] [Range= 0-72] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=55 /-] [Invalid=7070 /-]		
Definition	Generated from consolidated variables a941m and a941y.		
Universe	If R has a partner.		
Literal question	In what month and year did your partner/spouse start this leave? In what month and year did he/she become unemployed? Since what month and year is your partner/spouse a student, in school, or in vocational training? In what month and year did your partner/spouse retire? Since what month and year is your partner/spouse a homemaker?		
Notes	Partner's time of birth was deducted from HH grid (co-resident partner) or Q 311 (non resident partner). If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December". In Belgium if the partner is still in education (a941y==2301) then the variable was coded as system missing.

### # bmonth: Mnth of interview (W2)

<b>Interviewer's instructions</b>	<p>Interviewer Instruction: Read the following text.</p> <p>This survey is a continuation of the Generations and Gender Survey in which you participated three years ago. It is part of an international programme co-ordinated by the UN Economic Commission for Europe. An interesting feature of our research is that it tries to follow the lives of people over a long period of time.</p> <p>The aim of this research is to learn more about the everyday life, circumstances, and opinions of people and families. We want to gather information about the factors that influence the formation of new families, childbearing and preparation for old age. We also want to gather information about the lives of the young, middle-aged and old generations. This survey will show how people's life and family circumstances have changed over time, which will improve understanding of impediments of family life and relations of generations and help to develop policies for the future.</p> <p>Each person's answer is very important to us, because each person who was visited and questioned represents a particular group of our society. Therefore, although they were randomly selected, the participants of this survey proportionally represent all of the inhabitants of this country. That is why it is important to question the same people again this time.</p> <p>We will hold the information you give us in the strictest confidence, and use it only for statistical processing. If possible, it would be better if we could have this interview without others being present.</p>

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

### # bnummarriage: Total number of marriages (W2)

<b>Information</b>	[Type= discrete] [Format=numeric] [Range= 0-99] [Missing=*/96]
<b>Statistics [NW/ W]</b>	[Valid=6137 /-] [Invalid=6 /-]
<b>Definition</b>	Derived variable
<b>Notes</b>	The total number of marriages reported at wave 1 (variable nummarriage at wave 1 ) PLUS the marriages between the two waves (variable bnummarriage). Note that for wave 1 this variable includes marriages with co-resident as well as non-resident partners, whereas for wave 2 it only refers to marriages with co-resident partners.

Value	Label	Cases	Percentage
0		1563	25.5%

### # bnnumboth: The number of R's working statuses that have changed from part-time to full-time (W2)

Information	[Type= discrete] [Format=numeric] [Range= 0-4] [Missing=*/997/998/999]
Statistics [NW/ W]	[Valid=6143 /-] [Invalid=0 /-]
Definition	Derived variable from Q 805 (variables bn875_*).
Literal question	Was it full time or part time?
Notes	The number of R's working statuses that have changed from part-time to full-time (or the other way around) since age 16 (code 3 on Q 805, variables bn875_*).

Value	Label	Cases	Percentage
0		6143	100.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

### # bndurstudentstatuses: Total duration (in month) of Rs working statuses as student, in school, in vocat (W2)

Information	[Type= discrete] [Format=numeric] [Range= 0-768] [Missing=*/997/998/999]
Statistics [NW/ W]	[Valid=6143 /-] [Invalid=0 /-] [Mean=0 /-] [StdDev=0 /-]
Definition	Derived variable from Q 801, Q 802 and Q 803 (variables bn871_*, bn872m_*, bn872y_*, bn873m_*, bn873y_*).
Literal question	When did this period of [activity] start? When did this period of [activity] end?
Notes	Total duration (in month) of Rs working statuses as student, in school, in vocational training since age 16 (code 1 on Q 801, variable bn871_*). If information on the month of starting / month of ending the activity was missing, a 6 (june) was used in the calculation. Values smaller than 0 have been put equal to zero; values smaller than 1 have been rounded to 1/10 of a month; values exceeding 1 have been rounded to the nearest month. If the total duration was exceeding the difference between respondent's age at the interview (in months) and 192 months (i.e., 16 years*12) values have been put as equal to this difference.

Value	Label	Cases	Percentage
0		6143	100.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

### # bnduremplstatuses: Total duration (in month) of Rs working statuses as employed since age 16 (W2)

Information	[Type= discrete] [Format=numeric] [Range= 0-780] [Missing=*/997/998/999]
Statistics [NW/ W]	[Valid=6143 /-] [Invalid=0 /-] [Mean=0 /-] [StdDev=0 /-]
Definition	Derived variable from Q 801, Q 802 and Q 803 (variables bn871_*, bn872m_*, bn872y_*, bn873m_*, bn873y_*).
Literal question	When did this period of [activity] start? When did this period of [activity] end?
Notes	Total duration (in month) of Rs working statuses as employed since age 16 (code 2 on Q 801, variable bn871_*). If information on the month of starting / month of ending the activity was missing, a 6 (june) was used in the calculation. Values smaller than 0 have been put equal to zero; values smaller than 1 have been rounded to 1/10 of a month; values

### # bndurunemplstatuses: Total duration (in month) of Rs working statuses as unemployed since age 16 (W2)

<b>Information</b>	[Type= discrete] [Format=numeric] [Range= 0-720] [Missing=*/997/998/999]
<b>Statistics [NW/ W]</b>	[Valid=6143 /-] [Invalid=0 /-] [Mean=0 /-] [StdDev=0 /-]
<b>Definition</b>	Derived variable from Q 801, Q 802 and Q 803 (variables bn871_*, bn872m_*, bn872y_*, bn873m_*, bn873y_*).
<b>Literal question</b>	When did this period of [activity] start? When did this period of [activity] end?
<b>Notes</b>	Total duration (in month) of Rs working statuses as unemployed since age 16 (code 5 on Q 801, variable bn871_*). If information on the month of starting / month of ending the activity was missing, a 6 (june) was used in the calculation. Values smaller than 0 have been put equal to zero; values smaller than 1 have been rounded to 1/10 of a month; values exceeding 1 have been rounded to the nearest month. If the total duration was exceeding the difference between respondent's age at the interview (in months) and 192 months (i.e., 16 years*12) values have been put as equal to this difference.

# b121AgeR: R's age of starting to live in current dwelling (W2)			
Information	[Type= discrete] [Format=numeric] [Range= 0-9999] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=2011 /-] [Invalid=4132 /-]		
Definition	Derived variable from Q 117.		
Universe	If R's address has changed between the waves		
Literal question	In what month and year did you start living in this [type of accommodation]?		
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month of starting to live in the current dwelling was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".
