Generations and Gender Survey Wave 1 - Consolidated (GGS Wave 1 - Cons.)

Overview

Identification	GGSW1.Cons.
<p>Abstract</p> <p>The Generations and Gender Survey (GGS) provides micro-level data with the aim of significantly improving the knowledge base for social science and policymaking in Europe and developed countries elsewhere.</p> <p>In Europe 2020, the European Union develops a strategy "to help us come out stronger from the crisis and turn the EU into a smart, sustainable and inclusive economy delivering high levels of employment, productivity and social cohesion". The economic crisis affects not only day-to-day decisions, but also fundamental choices at all stages of people's lives: marriage and childbearing, the combination of employment and caring responsibilities for the young and the old, retirement, housing, and ageing well. The GGS has been developed to provide scientists with high-quality data to contribute scientifically grounded answers to these key policy questions. Survey content focuses on intergenerational and gender relations between people, expressed in care arrangements and the organization of paid and unpaid work. Key feature of the survey are:</p> <ul style="list-style-type: none"> - Cross-national comparability. In each country data is collected on the basis of a common international questionnaire and guidelines about the methodology. Data processing includes central harmonization of national datasets. - A broad age range. It includes respondents between the ages of 18 and 80. - A longitudinal design. It has a panel design, collecting information on the same persons at three-year intervals. - A large sample size. It has an average of 9,000 respondents per country at Wave 1. - A theory-driven and multidisciplinary questionnaire. It provides data for policy relevant research by demographers, economists, sociologists, social policy researchers, social psychologists and epidemiologists. The questionnaire is inspired by the theory of planned behavior. - Possibility to combine the survey data with macro data provided by the GGP Contextual Database. This combination enables analyses of individuals and families in their cultural, economic, political, social and policy contexts. 	

Scope & Coverage

Keywords	Fertility, Partnership, Transition to adulthood, Work-family balance, Gender Relations, Intergenerational exchange, Informal and formal care, Well being and health, Grandparenthood, Economic activity, Retirement
Countries

Files Description

Dataset contains 1 file(s)

GGS_Wave1_V.4.4								
# Cases	189212							
# Variable(s)	2376							
File Content <p>This study includes the consolidated GGS Wave 1 datasets. It contains all the GGS Wave 1 released datasets, except for Germany Turkish-subsample. All the available variables are included (also the country specific variables).</p> <p>VARIABLES HAVING ALL SYSTEM MISSING CASES ARE DROPPED BEFORE PUBLICATION IN NESSTAR. This is the reason why the total no. of variables in the Nesstar data file is smaller than the total number of variables in the SPSS and STATA files.</p> <p>Variables are ordered according to the sections of the GGS codebook: Household, Children, Partnerships, Household Organisation and Partnership Quality, Parents and Parental Home, Fertility, Health and Well-Being, Respondent's Activity and Income, Partner's Activity and Income, Household Possessions, Income and Transfers, Value Orientations and Attitudes, Interviewers' report.</p> <p>The variables begin with a letter designating the wave of data collection ("a" for the first wave likewise "b" for the second wave). We have attempted to keep the names of variables the same across the waves, and all the new variables would be identified as follows ["wave letter"]n e.g. bn301.</p> <p>Although we encourage the countries to strictly follow the GGS Questionnaire, countries might implement a question that differs to a considerable extent from the GGS Questionnaire. In this case either we add country specific response values, or we introduce a country specific variable.</p> <p>Country specific values are added when the question follows the model questionnaire, but the answers are not at all or partly compatible. They are at least 4 digits long (F4 format) and begin with the country code: e.g., Australia 2401. Hence, the country code, as an example, for Australia is 24.</p> <p>A country specific variable is introduced when the question differs from the model questionnaire albeit measuring the same concept. This kind of variables is identified with a suffix given by the country code plus a number, e.g., Australia a119_2401. In order to have an overview of GGS country code, please refer to the variable "acountry".</p>								
Producer <p>The file is produced centrally by the Netherlands Interdisciplinary Demographic Institute (NIDI, The Netherlands), in collaboration with the Survey Department of the "Institut national d'études démographiques" (INED, France).</p>								
Version <p>Harmonized dataset, GGS Wave1, version 4.3.1</p> <p>Improvements of GGS_Wave1_V.4.4</p> <ul style="list-style-type: none">- The update from v4.3 to v4.4 includes corrections of existing variables.- Belgium: Information previous partnership is updated. In previous versions, start of cohabitation was in fact start of relationship. This has been corrected. <p>For more information please read:</p> <p>Marteau, Benjamin. Correction of Dates of Partnership Formation and Separation in the Consolidated Wave 1 of the Generations and Gender Survey (GGS) Belgium. (2021) 39 pages</p> <ul style="list-style-type: none">- Update a5114_1dig for all countries but Sweden and Italy <table><tr><td>variable</td><td>V4.3</td><td>V.4.4</td></tr><tr><td>a5114_1dig</td><td>Wrong value</td><td>Corrected (not for Sweden and Italy)</td></tr></table>			variable	V4.3	V.4.4	a5114_1dig	Wrong value	Corrected (not for Sweden and Italy)
variable	V4.3	V.4.4						
a5114_1dig	Wrong value	Corrected (not for Sweden and Italy)						

a334m_* - a352b_* Wrong value Corrected (only for Belgium)

Variables corrected with Version 4.3.1

- aregion (correction for Sweden regions)
- a206 (now available also for Sweden)

Variables corrected with Version 4.3.

- fertintent (no more ambiguous labelling)
- a1101 (corrected error in coding)
- aweight (now available also for NLD CZE SWE POL)
- aregion (now available also for HUN)
- aplace (now available also for HUN)
- a5112 (corrected routing error for ROU)

- a620_ (corrected error for DEU & CZE)
- a402 (corrected error for POL)
- a149 (corrected error routing error in NOR)
- a344 (corrected error routing error in NOR)
- a256_ (corrected error for POL & GEO)

Information concerning changes across different versions of GGS datasets are available in the field "Data Files Description" of each country data file available in the GGS Online Data Analysis web platform.

Processing Checks

DATA HARMONISATION

The data is submitted in an already pre-harmonised form. It is prepared and organised according to the GGS standards. Harmonisation aims at achieving a clear and comparable format of the GGS micro-data files that would be adequate for cross-country comparison. The harmonisation procedure basically is composed of:

1. Label checks

This step makes sure that all the variables are named the same across the countries and refer to a particular question in the GGS Questionnaire. Also the value labels are checked. They should be the same across GGS datasets.

2. Dealing with grids

The GGS Questionnaire holds several grids of either event history information or members of the household. Such data needs to be harmonized with specific attention to order and logical consistency of grid-rows (be either household members or events such as births). In data sense each row of the grid is represented by variable name followed by a subscripted number ("_#"). Each subscript thus represents one household member or one event. Part of the grid harmonization is grid sorting. Grid rows are sorted according to pre-defined key. For example in the household grid, the household members are sorted according to their relationship to the respondent i.e. the relation to respondent variable (ahg3_# or bhg3_#). Respondents would appear, first, followed by their partners and children if any and then followed by other household members. As there may be more than one child (or other relative) living in the household they also would need to be sorted. In the case of the household grid, age is used as the secondary sorting key (starting with the oldest person to the youngest).

3. Routing

Routing check ensures that the structure of underlying data set matches the structure of the GGS questionnaire. Its main goal is to code any given variable in the dataset to either a valid response, nonresponse or skip as indicated in the questionnaire.

Consequently, the indicated skip in the questionnaire is represented with a system missing code (. in STATA, sysmis in SPSS), while the missing information for other reasons is coded into non-applicable/no response (i.e. codes 7, 8, 9 in SPSS or .a, .b, .c in STATA).

4. Consolidation

The process consolidates the information scattered over several variables into a single one. The consolidation procedure is carried out in the Children Section, the Partnership Section and the Parents and Parental Home Section.

5. Imputation

Due to its sensitive nature, the respondents are reluctant to share income information with the interviewer. In order to be able to use income information in a cross country comparative study and not to lose too many observations in the process it is necessary to impute the approximately correct distribution of the income variable in each country.

6. Calculation of derived variables

We calculate derived variables out of the following variables:

- grid variables (i.e., household grid, children grid, and partnership history grid); the codebook starts with the constructed variables that sum the key socio-demographic characteristics of the respondent.
- month and year variables,
- hours and minutes variables,
- frequency and unit variables.

Occupation variables are recoded into ISCO-88 1 digit.

Explanations of the ways in which consolidated and derived variables are obtained, are available under the field "Note" of the "Variable Description" sections.

For a more detailed and technical procedure please refer to the Data Cleaning and Harmonisation Guidelines.

Missing Data

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

Notes

Before publication in Nesstar GGS micro data files are further processed so as to ease online data browsing and analysing. We delete variables having all system missings.

Variables List

Dataset contains 2376 variable(s)

Definition	Q 001
Pre-question	Interviewer Instruction: Write in the time and date when the interview starts.
Literal question	Interview started at...on...
Interviewer's instructions	Interviewer Instruction: Read the following text. This survey is called the Generations and Gender Survey. It is about topics related to children, partners, parents, work and everyday life. The aim is to study what factors influence family formation, having children, and relations between younger and older generations. The study is part of an international programme co-ordinated by the UN Economic Commission for Europe. Your participation is voluntary, but it is very important because you represent many other people. We will hold

numdissol: Total number of partnerships dissolutions

Definition	Derived variable
Notes	The number of non-empty slots in the "Partnership history" grid (a343_*); core questionnaire, section 3, page 22. Note that this variable only refers to resident partners.

Value	Label	Cases	Percentage
0		150886	 79.7%
1		30963	 16.4%
2		5836	 3.1%
3		1231	 0.7%
4		217	 0.1%
5		54	 0.0%
6		18	 0.0%
7		5	 0.0%
9		2	 0.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

numdivorce: Total number of partnerships ending in divorce

Information	[Type= discrete] [Format=numeric] [Range= 0-3] [Missing=*]
Statistics [NW/ W]	[Valid=182087 /-] [Invalid=7125 /-]
Definition	Derived variable
Notes	The number of previous partners with whom Respondent was married AND broke up (code 1 on question 327 (a335a) and code 1 on question 330 (a343), "Partnership history" grid). Not available for Australia as partnership history grid differs in Australian survey.

Value	Label	Cases	Percentage
0		159070	 87.4%
1		21265	 11.7%
2		1636	 0.9%
3		110	 0.1%
4		5	 0.0%
5		1	 0.0%
Sysmiss		7125	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

nummarriage: Total number of marriages

Information	[Type= discrete] [Format=numeric] [Range= 0-3] [Missing=*]
Statistics [NW/ W]	[Valid=189212 /-] [Invalid=0 /-]
Definition	Derived variable
Notes	The number of previous partners with whom Respondent was married (code 1 on question 327 "Partnership history" grid) PLUS the current marriage if one exists (code 1 on question 302 / variable a302a OR code 1 on question 310 / variable a314a).

Value	Label	Cases	Percentage
0		55295	 29.2%
1		123844	 65.5%
2		9405	 5.0%
3		620	 0.3%
4		44	 0.0%

File : GGS_Wave1_V.4.4

nummarriage: Total number of marriages

Value	Label	Cases	Percentage
5		3	0.0%
6		1	0.0%

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

numpartnerships: Total number of partnerships

Information	[Type= discrete] [Format=numeric] [Range= 0-4] [Missing=*]
Statistics [NW/ W]	[Valid=182087 /-] [Invalid=7125 /-]
Definition	Derived variable
Notes	<p>The total number of partnership dissolutions (see variable numdissol) PLUS the current partnership if one exists (partner is present in the Household grid). Note that this variable only refers to resident partners, past and present.</p> <p>Not available for Australia as partnership history grid differs in Australian survey</p>

Value	Label	Cases	Percentage
0		33302	18.3%
1		125286	68.8%
2		19715	10.8%
3		3156	1.7%
4		511	0.3%
5		82	0.0%
6		22	0.0%
7		10	0.0%
8		1	0.0%

Sysmiss		7125	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

childprevp: any children from previous partnership

Information	[Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]
Statistics [NW/ W]	[Valid=151122 /-] [Invalid=38090 /-]
Definition	Derived variable
Notes	<p>"Yes" if Respondent had children with any previous partner (question 332 (a345), "Partnership history" grid); "No" otherwise.</p> <p>Data not available for Australia, Hungary, Estonia or Italy.</p>

Value	Label	Cases	Percentage
1	Yes	16003	10.6%
2	No	135119	89.4%
Sysmiss		38090	

Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.

femage: If partnered: age of female

Information	[Type= discrete] [Format=numeric] [Range= 14-85] [Missing=*]
Statistics [NW/ W]	[Valid=69544 /-] [Invalid=119668 /-]
Definition	Derived variable
Universe	If R has a partner

File : GGS_Wave1_V.4.4

femage: If partnered: age of female

Notes	<p>This variable indicates the age of the female in the relationship if the respondent says that they are currently in a relationship. If the respondent is female then the respondents age is used (aage.)</p> <p>If the respondent is male and in a relationship with a female then their age is derived depending on the nature of the relationship. For a resident partner the age was copied from the Household grid (ahg5_); for a non resident partner the age was calculated as: year of interview MINUS question 311 (variable a315y).</p> <p>Rs with non-resident partners are coded with "999 - not applicable/no response", when variable a315y is not available in the dataset.</p> <p>Note that this variable does not have a value for same-sex partnerships.</p>

# a150AgeR: R's age of achieving the current education level			
Information	[Type= discrete] [Format=numeric] [Range= 0-69] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=159035 /-] [Invalid=30177 /-]		
Definition	Derived variable from Q 122 core questionnaire		
Literal question	In what month and year did you reach that level?		
Notes	<p>R's time of birth was deducted from HH grid. If information on the month of birth / month of achieving the current education level was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".</p> <p>Data is not available for Norway.</p>

# a205mnth: Personal costs for child care per month			
Information	[Type= discrete] [Format=numeric] [Range= 1-1317] [Missing=*/99999997/99999998/99999999]		
Statistics [NW/ W]	[Valid=19644 /-] [Invalid=169568 /-]		
Definition	Q 205 core questionnaire		
Universe	If children younger than 14 are present in the household		
Literal question	How much does your household usually pay per month for childcare, if anything?		
Notes	Frequencies per week and year were converted into frequency per month. Values have been rounded to 1/10; values exceeding 1 have been rounded to the nearest integer.

# a239aAgeR: R's age at birth of oldest grandchild			
Information	[Type= discrete] [Format=numeric] [Range= 19-72] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=33971 /-] [Invalid=155241 /-]		
Definition	Derived variable from Q 239.a core questionnaire		
Universe	If R has 2 or more grandchildren		
Literal question	In what month and year was the oldest of your grandchildren born?		
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month at birth of oldest grandchild was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"

Definition	Derived variable from Q 303.c core questionnaire		
Universe	If code 2 on Q 303.a		
Literal question	In what month and year did he/she first start living permanently in [country]?		
Notes	Partner's time of birth was either deduced from HH grid. If information on partner's month of birth / month when partner started living permanently in country was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"

Information	[Type= discrete] [Format=numeric] [Range= 1-2147483624] [Missing=*/7/8/9]		
Statistics [NW/ W]	[Valid=64840 /-] [Invalid=124372 /-]		
Definition	Q 306 core questionnaire		
Universe	If R does NOT have a co-resident partner		
Literal question	Are you currently having an intimate (couple) relationship with someone you're not living with? This may also be your spouse if he/she does not live together with you. Our survey does not only cover heterosexual relationships, but also same-sex relationships. If you have a partner of the same sex, please answer the following questions as well.		
Value	Label	Cases	Percentage
1	yes	12205	<div></div> 18.8%
2	no	52635	<div></div> 81.2%
7	does not know	6

# a311AgeR: R's age at start of current relationship			
Information	[Type= discrete] [Format=numeric] [Range= 10-72] [Missing=*/997/998/999]		
Statistics [NW/ W]	[Valid=10584 /-] [Invalid=178628 /-]		
Definition	Derived variable from Q 307 core questionnaire		
Universe	If R has a non-resident partner (code 1 on Q 306)		
Literal question	In what month and year did this relationship start?		
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month when started current relationship was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"

a316cAgeP: Partner's age at start of permanent residence

Information	[Type= discrete] [Format=numeric] [Range= 10-34] [Missing=*/997/998/999]
Statistics [NW/ W]	[Valid=642 /-] [Invalid=188570 /-]
Definition	Derived variable from Q 312.c core questionnaire
Universe	If code 2 on Q 312.a
Literal question	In what month and year did he/she first start living permanently in [COUNTRY]?
Notes	Non Resident Partner's time of birth was deducted from the answer to Q 311. If information on the month of birth / month of starting permanent residence was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"
